

I respectfully urge the FCC to reject the National Assoc of Broadcasters petition 04-160. As a listener and subscriber of XM radio, it is a benefit to have this service available since we frequently travel in the West and it is often difficult to receive broadcasts of local stations. The traffic channels can be of great benefit when traveling I-17 to Phoenix. A major accident can leave traffic stopped for miles as this is the only Interstate from North to South. It is a benefit to know if I should be prepared to sit in the dessert heat for hours!

Sattelite radio provides the variety and quality of programming that is not available anywhere else.

Sincerely,
Laura Clonts
